National Conference on Regulatory Interface, NCRI-2024

The National Conference on Regulatory interface was conducted in Niyamak Bhavan-A on October 8th 2024. This year, the theme of the conference was 'Effective use of Periodic Safety Review (PSR) programme for licensing & continued safe operation of Nuclear Power Plants'. The feedback on the regulatory processes associated with these themes is desired for continual improvement in the reviews carried out at AERB.

AERB periodically reviews its regulatory mechanism and strive for its continuous improvement based on the experience gained from regulation and interface with its licensees. For effective regulation, it is required to create a common platform for the licensee and the regulator to interact to understand the challenges faced by the licensees in understanding current regulatory practices & challenges associated with it. With this objective, AERB is organizing National Conference on Regulatory Interface (NCRI) every year since 2017.
