

Cyber Security Awareness Month

The Cyber Security Awareness Month program was conducted in AERB from October 1, 2023 to October 31, 2023 to enhance the understanding and awareness of cyber threats and security measures among AERB employees. This initiative aimed to equip employees with a better understanding of cyber threats and security measures.

This program covered lectures on a range of topics including social engineering, mobile security, desktop and email security, cyber hygiene and security in nuclear industry, ethical cyber behaviour and understanding domain concepts

Activities like quizzes, daily awareness emails, and poster contests further reinforced the importance of cyber vigilance at a personal and also at an organizational level. The highlight was a simulated phishing activity that helped raise awareness about identifying and avoiding suspicious emails.
